

Height
and
temperature

Mount Everest
is the tallest
mountain in
the world!

It is an amazing
height of 29029
feet or 8848 metres;
that is ENORMOUS!

In fact, the lowest
temperature that
was ever recorded
was -60°C - that is
freezing cold. You will
need a lot of layers to go
up Mount Everest.

Some people like me
believe that there are
animals living in
Mount Everest!

Health:

There are
lots of different
conditions that
you can get such
as: frost bite. Some
times you can be
sick.

First Aid kit is
really important

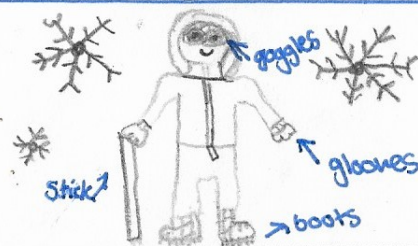

Don't
fall off
the
mountain

Snow Boots

Snow goggles

Blackened
hands
or
toes,
from
frost bite

Cracked
red
skin

Equipment:

Snow Gloves

Walking
sticks

inside
First Aid
kit

bandage
tins

Medicine

vitamins

Oxygen

canisters
and
breathing
masks

Birds know as
Chough (Choff)
can go as high
as 7900 metres

Animals:

I believe
Somewhere
tucked up
in Everest
lives A YETI!

A
real
Yeti
Foot print!

Weather

The highest temperature ever
recorded is -18°C there are
lots of raging storms and howling
winds and lots of snow. The
air on the mountain is very thin.

Food

They had: biscuits, bacon, cheese, choc
and sweets, Jam, Stewed Steak and
marmalade.

tin openers, fibre cloths, toilet paper and
matches.

Climbers have to eat 6000 calories each
day

Name is
abominable!

Yaks are found at
sea level

Crazy jumping
spiders live
around 6700
metres

other animals
are
snow leopards
musk deer
red Panda
black bears
all on
lower
levels.
